YOU CAN'T PROTECT WHAT YOU CAN'T SEE

View every cloud asset, configuration, and relationship with imPAC Labs. From S3 bucket ACL Grants to IAM role↔encryption key relationships, **unlock comprehensive visibility** that other tools miss.

ILLUMINATE YOUR CLOUD UNIVERSE

- High fidelity data straight from the source
- Built-in risk scoring to highlight critical assets
- Automated discovery of buckets, keys, replication rules, and dependencies
- Configurations mapped to standards for continuous compliance
- Scalable across millions of assets
- Unified security view across all teams
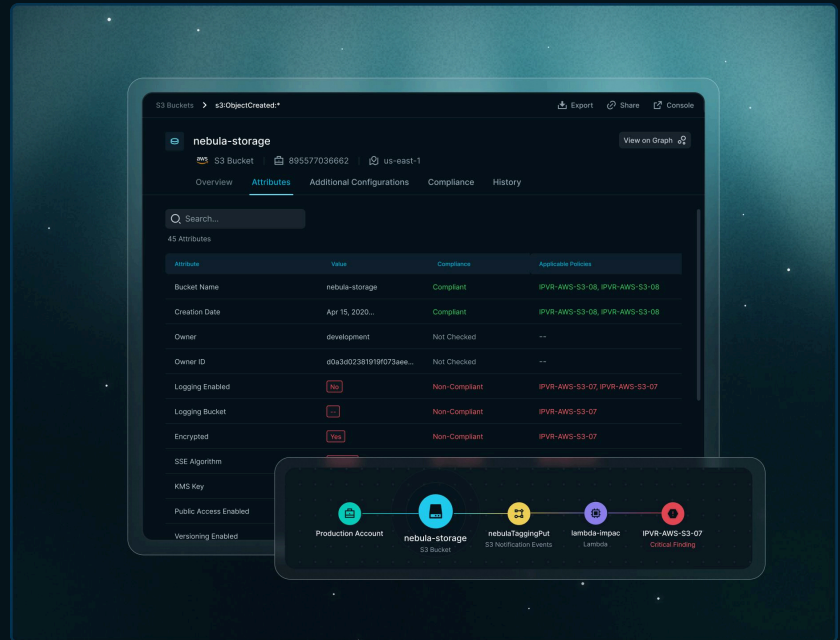

WHY VISIBILITY MATTERS

🔒 Proactive Security
Build preventative asset-based controls rather than waiting for risks to surface

🔕 Cut through the noise
Understand which assets and relationships are actually business critical

⊘ No more false positives
Get only the alerts that matter with verified data on full asset context

FURTHER USE CASES:

RANSOMWARE
Mitigate attack risks with controls that ensure sensitive data is properly airgapped

CYBER INSURANCE
Defend against rising premium costs by showcasing daily asset changes

M&A
Generate a holistic view of target's compliance state and security posture

DATA RESILIENCY
View controls and encryption lifecycle to ensure cloud logs and backups are captured
